ASSIGNMENT 1 HCD

Human-Centered Design: Good and Bad Examples

Human-Centered Design (HCD) prioritizes user needs and behaviors, creating functional, user-friendly solutions. This report provides examples of good and bad HCD based on personal experiences.

Example 1: Good HCD - Google Maps
Google Maps excels with intuitive navigation, real-time updates, and accessibility options like voice guidance and wheelchair-friendly routes. Its clean interface and constant innovation ensure a seamless experience.

Example 2: Bad HCD - Smart TV Remote
A Smart TV remote with cluttered buttons, no feedback, and a confusing layout made operation frustrating. Improvements like simplified design and accessibility features could enhance usability.

Conclusion
Google Maps demonstrates effective HCD, while the poorly designed Smart TV remote highlights the consequences of neglecting user needs. Prioritizing usability and feedback is essential for successful design.
